10 Sub-domains

25 FTP accounts

99.9% uptime guarantee

Monthly Site Statistics Reports & Resource Alerts

### Enterprise Plan

\$50/month\*

1500GB Disk Space

15TB Bandwidth

SQL Database

50 Full-service **Secured** email accounts (Forwarding, Auto- responders, Virus protection, Filtering)

20 Sub-domains

50 FTP accounts

99.9% uptime guarantee

Monthly Site Statistics Reports & Resource Alerts

Secured domain using SSL Certificate (Does not include price of certificate)

### Unlimited Plan

\$100/month\*

1750GB Disk Space

15.5TB Bandwidth

Unlimited SQL Database

Unlimited Full-service **Secured** email accounts (Forwarding, Auto-responders, Virus protection, Filtering)

Unlimited Sub-domains

Unlimited FTP accounts

99.9% uptime guarantee

Monthly Site Statistics Reports & Resource Alerts

Secured domain using SSL Certificate (Does not include price of certificate)

*\*All plans require a 1 year minimum due during registration.*

## Glossary of Terms:

**Disk Space (Gigabytes):** The amount of storage space allocated per web hosting account for a websites code and documents. This space can be split by multiple sites and in many configurations. Due to the low cost of disk storage, even the most basic hosting plans should satisfy all but the most media-rich sites.

**Bandwidth (Terabytes):** The allocated total throughput for each hosting account. Whenever web pages are loaded or files are downloaded to a user, some of the bandwidth is consumed. All of our plans have exceptional bandwidth allowances.

**Databases:** Databases are required to store dynamic content or information accessible by your website. Email addresses, survey results, and even content that is shared throughout the website may utilize a database.

**Full Service Email:** Full service indicates the ability to set up automated procedures such as email forwarding to a secondary address, auto-responders, spam and virus protection. Security is achieved using the latest Certificate Authority (CA) digital signatures and/or 2048-bit encryption to ensure content integrity is maintained and senders and recipients are verified.

**Sub-domains:** Sub-domains refer to the web address that contains a prefixed name in front of the primary domain name. e.g. <http://support.yourweb.com> or **store.yourweb.com**.

**FTP:** File Transfer Protocol is a universal protocol that allows the uploading and downloading of content and documents to your website. FTP accounts can be set up to restrict access or allow administrative management.

**Monthly Statistics Reports & Resource Alerts:** Each month you will receive detailed analytics of your web traffic as well as alerts if you are nearing your bandwidth or storage limits in order to avoid overage charges.

**SSL Certificates:** Certificates are dispensed by Certificate Authorities to provide assurances to your customers that you are who you say you are and data they are transmitting stays safe. All transmission of personal data should require a Secure Certificate.
